

SERA PROGNOSTICS APPOINTS DR. PAUL KEARNEY AS CHIEF DATA OFFICER **Brings extensive data science, bioinformatics and proteomics experience to foster further product innovation and informed healthcare insights into pregnancy**

Salt Lake City, Sep. 28, 2021 (GLOBE NEWSWIRE) —[Sera Prognostics](#) Inc., The Pregnancy Company™ (NASDAQ: SERA), focused on improving maternal and neonatal health by providing innovative pregnancy biomarker information to doctors and patients, today announced the appointment of Dr. Paul Kearney to the position of Chief Data Officer, effective October 1, 2021. As the chief data/analytics officer, Dr. Kearney will have responsibility to help direct, manage and analyze the large and growing data sets of Sera, both scientific and business, as Sera engages in studies designed to more fully characterize pregnancy and as commercial activities ramp during this phase of the company's development.

"We are delighted to have Paul Kearney bring his extensive data science capabilities and experience to the Sera Prognostics team as we further our mission as The Pregnancy Company™," said Gregory C. Critchfield, M.D., M.S., Chairman and CEO of Sera Prognostics. "Paul's deep experience and fundamental understanding of data will help Sera build a solid bridge at the intersection of business, healthcare, bioinformatics, and innovation, where critical societal and clinical unmet needs can be addressed through partnerships, data exploration, and individualized maternal and prenatal healthcare. These approaches are most pertinent for Sera to effectively address healthcare disparities and enormous challenges that exist in pregnancy."

Prior to joining Sera Prognostics, Dr. Kearney co-founded multiple successful biotech companies and data enterprises, resulting in the development and commercialization of breakthrough products in the disease areas of oncology, pregnancy, and food allergy, as well as technological products in bioinformatics and proteomics. He has extensive experience building and nurturing integrated teams, conducting clinical research, developing evidence for improved health outcomes, and fund raising. Dr. Kearney has published over 100 papers in diverse areas and has been awarded over 12 patents. Previously, he worked in positions at the Institute for Systems Biology, Integrated Diagnostics, Caprion (now CellCarta), Data Incites, Bioinformatics Solutions, and AllerGenis. Dr. Kearney received his Ph.D. in Bioinformatics/Computer Science from the University of Toronto and was a member of the Computer Science Faculty of the University of Waterloo.

"Sera Prognostics has an expansive and unique vision for utilizing novel biotechnology tools and innovative machine learning techniques to address the biggest clinical challenges associated with pregnancies," said Dr. Kearney. "It is an enormous opportunity to partner with the world class team at Sera to address these challenges and improve health outcomes for mothers and babies."

About Sera Prognostics, Inc.

Sera Prognostics is a leading health diagnostics company dedicated to improving the lives of women and babies through precision pregnancy care. Sera's mission is to deliver early, pivotal information in pregnancy to physicians, enabling them to improve the health of their patients, resulting in reductions in the costs of healthcare delivery. Sera has a robust pipeline of innovative diagnostic tests focused on the early prediction of preterm birth risk and other complications of pregnancy. Sera's precision medicine PreTRM® test reports to a physician the individualized risk of spontaneous premature delivery in a pregnancy, enabling earlier proactive interventions in women with higher risk. Sera Prognostics is located in Salt Lake City, Utah.

About Preterm Birth

Preterm birth is defined as any birth before 37 weeks' gestation and is the leading cause of illness and death in newborns. The 2020 March of Dimes Report Card shows that of approximately 3.8 million babies born annually in the United States, more than one in ten is born prematurely. Prematurity is associated with a significantly increased risk of major long-term medical complications, including learning disabilities, cerebral palsy, chronic respiratory illness, intellectual disability, seizures, and vision and hearing loss, and can generate significant costs throughout the lives of affected children. The annual health care costs to manage short- and long-term complications of prematurity in the United States were estimated to be approximately \$25 billion for 2016.

About the PreTRM® Test

The PreTRM® test is the only broadly clinically validated, commercially available blood-based biomarker test that provides an early, accurate and individualized risk prediction for spontaneous preterm birth in asymptomatic singleton pregnancies. The PreTRM® test measures and analyzes proteins in the blood that are highly predictive of preterm birth. The PreTRM® test empowers physicians to better identify, during the 19th or

20th week of pregnancy, women are at increased risk for preterm birth, enabling more informed, personalized clinical decisions based on each woman's individual risk. The PreTRM® test is ordered by a medical professional.
